

# GTP-1

## GreenTrac Pumping System

Exclusively From  
**PAMARCO**  
GlobalGraphics

- How much time do you waste, every day, knifing ink into a fountain?
- Do you have limited access to the ink fountains?
- How much ink is wasted by overfilling the fountains?
- How much is lost due to skinning? Or because the operator simply couldn't get all the ink out of the container?
- After adding ink, how much stock do you waste trying to regain color consistency?
- And how much is it costing you to cover time lost due to accidents – or to musculoskeletal disorders like carpal tunnel, caused by frequent repetitive motion?

The GreenTrac **GTP-1** Performance Pumping System delivers consistently higher print quality, with less waste, lower costs, lower environmental impact, and greater profitability.

The **GTP-1** is available for most presses. Green Trac **GTP-1** is another environmentally friendly product available exclusively from Pamarco Global Graphics

Now you can recapture those costs – and improve your performance and profitability on every job – with the revolutionary **GTP-1** GreenTrac Performance Pumping System from Pamarco Global Graphics. **GTP-1** is a remote controlled, completely automated ink dispensing system. Using ultrasonic sensors, **GTP-1** monitors the amount of ink as it tracks across the fountain. When ink falls below the pre-set level anywhere in the fountain, the **GTP-1** automatically adds the required amount, exactly when and where it's needed. It uses a reliable stepper motor drive to move the dispensing head across the ink fountain...and deposit fresh ink onto the fountain roller ball as needed. The system can use any ink source – from a five-gallon pail, to a 55-gallon drum, to a one-ton tote.

Designed to fit into tight, restrictive areas, the **GTP-1** is an environmentally friendly system. Except for the fountain, the entire system is completely sealed, reducing VOC's in the pressroom. Because it pumps only the amount of ink needed, the **GTP-1** reduces total ink usage by 15 to 20 percent. And it's easy to operate! Control functions are mounted to the side of the press, placing them at the operator's fingertips.
